

The logotype should always be surrounded by a buffer area of clear space to separate it from copy and other graphic elements. The clear space around the logotype on all sides should be equal to half the width of the letter T in order to ensure legibility and impact.

TEAK

Digital W 40 px
Print W 0.55 in

Minimum size refers to the smallest size the logotype may be reproduced to preserve its legibility. As the minimum size is based on the legibility of the smallest details, the full logotype should never appear smaller than the printed and digital widths listed above. Please note that the minimum size is not the same as the recommended size.

The Teak's social media profile picture (avatar) is the logotype, centered within the circle at 5/7 of the width. The avatar can be recreated in the color combinations outlined in the Color section of this manual. Choose a contrasting color pairing between the background color and the mark color to ensure legibility.

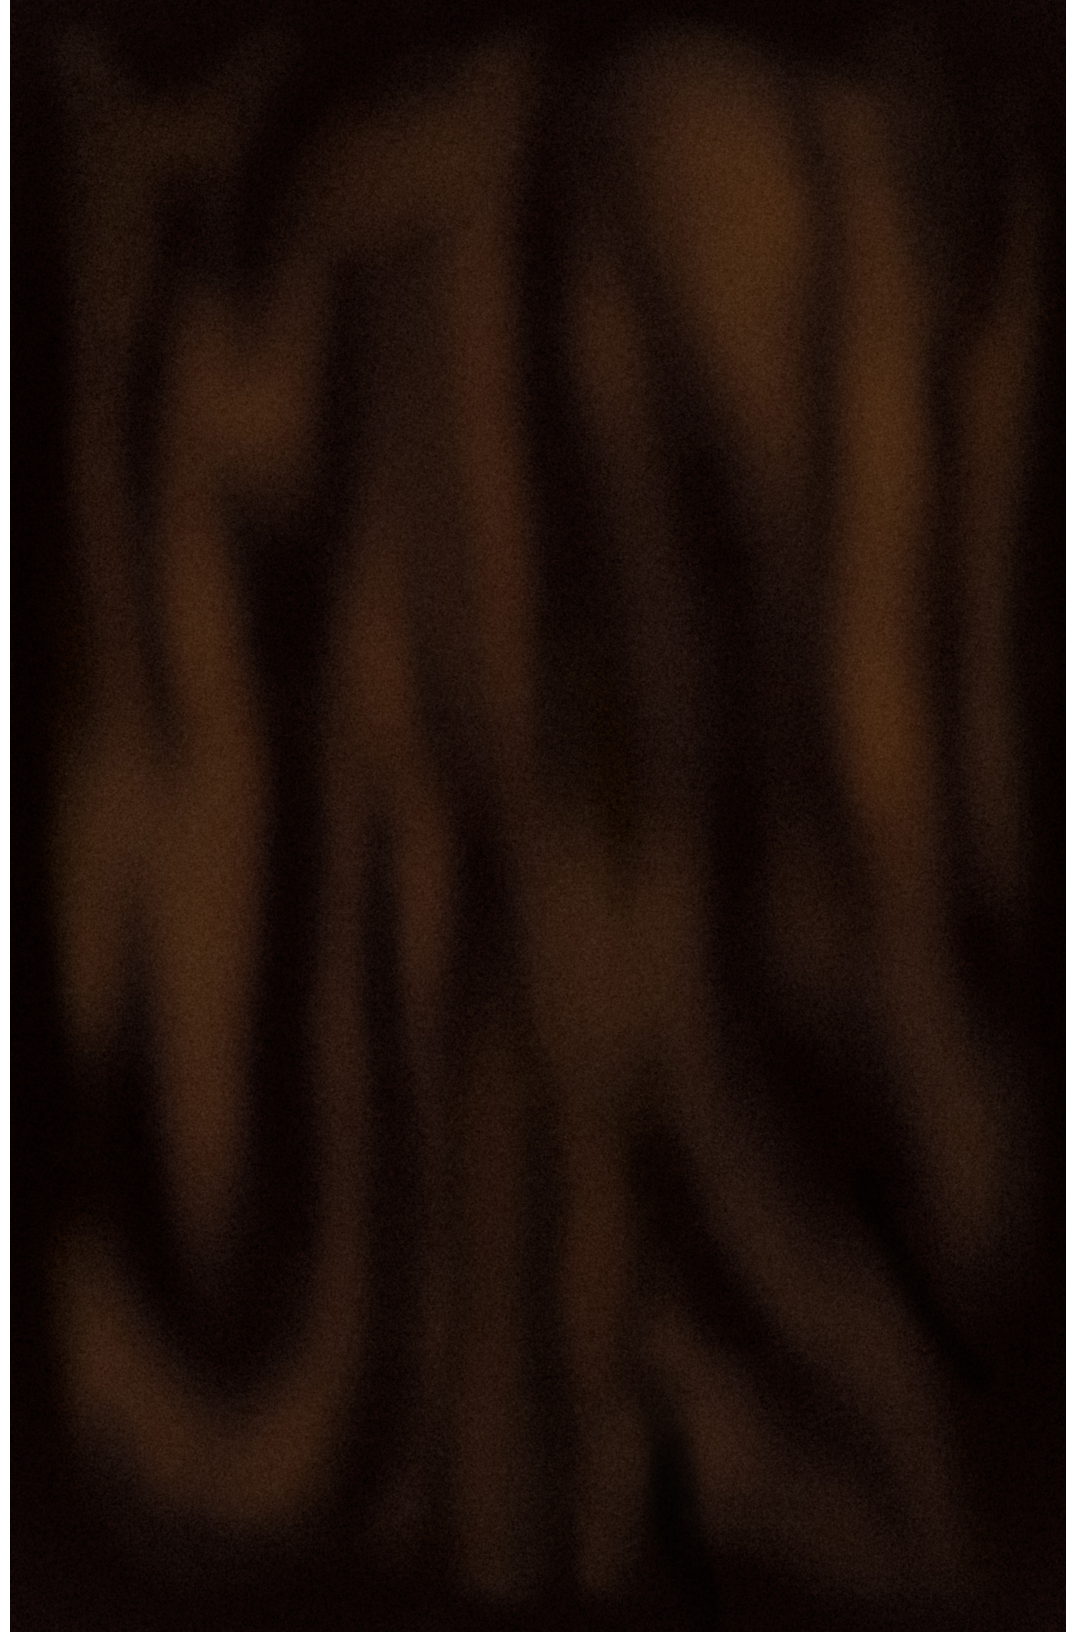

The Pattern (2.3)

23

The brand pattern draws from the original inspiration behind the identity: wooden teak doors. Use the pattern sparingly, mainly in primary packaging, to keep it special.

The pattern should only be used for primary packaging only. It should always be cropped all the way to the edges of the surface it's implemented on.

— The pattern is provided in .psd and .pdf formats.

Color & Material (2.4)

25

The color palette is a fusion of energy and elegance. Vibrant hues of ochre, purple, and blue bring a sense of playfulness, while more muted tones add warmth and sophistication.

Teak's color palette comprises of seven primary colors and one secondary color, as well as black and white, used primarily for copy and logo over imagery. A lighter background color can be created for digital implementations by using Sand at a 50% or 30% opacity. The primary colors should always be the most prominent in printed implementations.

Adhere to the specifications listed here and select the color values according to the intended use. In print, Pantones are always preferred for a more exact reproduction of the chosen colors. Use preferred vendors and reproduction methods to ensure consistency of the brand.

When layering colors, the chosen hue should always contrast with its background: this ensures legibility and optimal reproduction quality across all printing processes and digital needs. Colors can be paired in any combination when used next to one another, but when overlaid, refer to the combinations outline on this spread to ensure legibility. When handling longer copy, aim to use one of the background colors with a high contrasting Black.

The selected stocks should be sturdy enough and be uncoated whenever possible. The examples of print finishes in this spread should act as inspiration when creating printed pieces. Whenever possible, it is encouraged to use premium finishes instead of standard digital or CMYK printing: the use of blind emboss, Pantone colors for flat color surfaces, or white silkscreen lifts the printed implementations from expected to special. The examples of print finishes in this spread should act as inspiration when creating printed pieces.

Typography (2.5)

29

Typography, used consistently, is an important design element in establishing a recognizable graphic identity. The Teak type palette is elevated but functional — classic in its influences, but modern in its implementation. The primary typeface is Wolpe Pegasus, bringing an elegant, fashion-forward maturity to the type palette.

Typography, used consistently, is an important design element in establishing a recognizable graphic identity. The Teak type palette is elevated but functional — classic in its influences, but modern in its implementation.

It is study in balance: Wolpe Pegasus (by Monotype) creates an elegant, fashion-forward maturity to the type palette as the main typeface of the identity, while ABC ROM (by ABC Dinamo) is a utilitarian typeface with playful details.

ABC ROM Medium

Wolpe Pegasus is the primary typeface of the Teak identity. This page outlines examples of different ways to create size hierarchy between different text elements. The usage of the Wolpe Pegasus is split into 3 size alternatives: Large, Medium, and Small. Pegasus Large is the only type style for type setting individual titles. Pegasus Medium and Pegasus Small are used for longer paragraphs.

Creating hierarchy within type is key for emphasizing the most important messages: make sure to create enough size variation between elements. It is important to refer to the specifications below for a polished outcome: the type sizes listed above can be increased or decreased proportionally, but need to always retain the same line height and letter spacing ratios as here.

Color Theory is a set of principles that tells us that the way we perceive a color depends on its surrounding colors. This is why the same lipstick can look so different on two different people.

This page outlines examples of the use of ABC ROM within the Teak brand implementations. ABC ROM is implemented as a supporting font and only in one size variation across. It is designed to be used both in lowercase and all caps. Please use it for short texts (except ingredient lists) such as links and tags. Always use it in a small size, and as consistently as possible in the same size as outlined here.

LIPSTICK COLOR THEORY PART 1 →

(D) (C)

This page outlines examples of incorrect use of the Teak brand fonts.

- (A) Do not use ABC ROM as the title typeface.
- (B) Do not use ABC ROM for longer, larger copy.
- (C) Do not use all caps for a singular word in titles and do not mix the typefaces within a paragraph.
- (D) Do not use Pegasus Wolpe for link buttons.
- (E) Do not set tracking to anything other than 0.
